This section is *optional* and can be used to provide a summary of recommendations to the IT manager regarding which controls and/or compliance best practices Botium Toys needs to implement, based on the risk posed if not implemented in a timely manner.

Recommendations (optional): In this section, provide recommendations, related to controls and/or compliance needs, that your IT manager could communicate to stakeholders to reduce risks to assets and improve Botium Toys' security posture.

For recommendations, I would ensure that access for employees is limited to the least to make sure that they can do their job but not have so much information. Following least privilege. It seems as though anyone in the network can access somebody's PII / SPII which can lead to vulnerabilities and risks when it comes to an attack.

Furthermore, I would have a policy put in place for the company for passwords. Making sure that they follow the basic procedure of at least 8 letters, a capital letter, and some numbers. It's great that this company is able to contain information securely and ensure data integrity. However, there should be some encryption added for better security and also have some data recovery plans added.
